

ANQI SUN

sunanqi317@gmail.com ◇ Beijing, China

Research Interests: Playable Heritage; Interactive Virtual Museums; Digital Craft; AIGC-Assisted Craft Translation

EDUCATION

Master of Design, China University of Geosciences (Beijing) Sep. 2024 – Jul. 2027

Average Score: 88.3/100 **GPA:** 3.48/4.0 **Ranking:** 4/40

Relevant Coursework: Chinese Traditional Material Culture; Master's Literature Review; Jewelry Marketing

Bachelor of Product Design, China University of Geosciences (Beijing) Mar. 2022 – Jul. 2024

Average Score: 93/100 **GPA:** 3.64/4.0

Relevant Coursework: Chinese and Foreign Art History; Design Composition; Ceramic Craftsmanship

PUBLICATIONS AND PRESENTATIONS

Modelling Haipai Pankou as Computable Heritage: A Semantic–Structural Framework for Digital Interpretation, Generation, and Fabrication

First Author, Manuscript submitted to *Digital Scholarship in the Humanities*

Under Review

Emotion-Oriented Cultural Jewelry Design Using AIGC: A Case Study of the Eastern Han Drumming and Chanting Figurine

First Author, Accepted Conference Paper and Oral Presentation, DHIDE 2025

Jul. 2025

Accepted for publication, expected Oct. 2026

RESEARCH EXPERIENCE

Haipai Pankou as Playable and Computable Craft Heritage

2025 – Present

China University of Geosciences (Beijing)

Part I: Semantic–Structural Framework for Computable Craft Heritage

- Built a Haipai Pankou cultural gene database based on approximately 200 image samples, integrating visual forms, craft features, cultural meanings, and structural skeletons.
- Developed a seven-dimensional labelling system covering form, craft, material, colour, composition, motif semantics, and structural skeleton.
- Organised Pankou forms as computable cultural heritage data to support digital interpretation, AIGC-assisted visual translation, interactive display, and fabrication-oriented design exploration.

Part II: AIGC-Assisted Pankou Visual Translation, Image Restoration, and Jewelry Generation

- Conducted LoRA fine-tuning experiments using Pankou structural labels and semantic prompts to explore AIGC-assisted visual translation of Haipai Pankou.
- Generated Pankou-inspired jewelry design proposals through AIGC-assisted workflows, focusing on structural clarity, motif semantics, material expression, and jewelry-design completion.
- Used Stable Diffusion to restore and visually complete selected Republican-era Pankou images, and evaluated selected generated outcomes through expert assessment and physical fabrication.

Part III: Unity- and Web-Based Pankou Display Prototype and Playable Interaction Design

- Created and classified approximately 50 digital Pankou models based on original materials, restored historical images, and digital modelling practice.
- Developed preliminary Pankou display and browsing functions in Unity-based and web-based prototypes, presenting Pankou forms, structural features, visual details, and cultural information.

- Designed the initial framework for future interactive modules, including Qipao–Pankou matching, craft-making interaction, craft-process display, and cultural gene visualisation, which remain under development.

Emotion-Oriented Cultural Design and Symbolic Translation

2024 – Present

China University of Geosciences (Beijing)

- Explored museum-inspired cultural design using emotional design theory, Peircean semiotics, and AIGC-assisted design methods.
- Used the Eastern Han Drumming and Chanting Figurine as a case study to extract cultural symbols such as smile motifs, drum forms, dynamic posture, and rhythmic gestures.
- Generated jewelry and cultural design proposals with Midjourney and Dreamina, evaluating them through cultural expression, emotional resonance, and visual aesthetics.

Design Ethics, Playful Interaction, and Emotion-Oriented Jewelry Practice

2025

China University of Geosciences (Beijing)

- Designed an emotion-oriented interactive jewelry concept integrating emotional companionship, modular structure, playful user interaction, and material experimentation.
- Evaluated the design concept through ethical reflection, focusing on material sustainability, product safety, cultural originality, user emotional response, and social responsiveness.

Traditional Craft and Material Culture in Jewelry Design

2025

China University of Geosciences (Beijing)

- Studied Tang Dynasty gold and silver artifacts, traditional techniques, and symbolic motifs as references for contemporary cultural design.
- Evaluated the transformation potential of traditional motifs and craftsmanship by considering cultural symbolism, visual adaptability, material expression, and relevance to contemporary jewelry design.

Padparadscha Sapphire and Material Expression in Contemporary Jewelry Design

2025

China University of Geosciences (Beijing)

- Investigated Padparadscha sapphire as a material-cultural case study, examining its pink-orange chromatic identity, rarity, gemstone value, and symbolic associations within contemporary jewelry design.
- Explored how gemstone colour, material narrative, emotional symbolism, and visual adaptability can inform contemporary jewelry concepts that connect material culture with aesthetic and affective expression.

INTERNSHIP EXPERIENCE

Museum Intern, Bengbu Museum, Anhui Province, China

Dec. 2025 – Feb. 2026

- Assisted with museum exhibition support, cultural heritage documentation, and visitor-oriented interpretation materials.
- Gained practical experience in how cultural objects are organized, communicated, and interpreted for public audiences in museum contexts.

SKILLS

Generative AI Tools: Stable Diffusion, Midjourney, Dreamina

Design and Prototyping Tools: KeyShot, Adobe Illustrator, Nomad Sculpt, Unity

AI-Assisted Coding and Prototyping: Cursor, prompt-based programming, rapid web prototyping

Documentation and Programming: LaTeX, C++
